

This dinosaur is one of the special *Good to Grow!* stickers!

That's Big

Brachiosaurus was one of the largest dinosaurs measuring around 23 feet in length! To see how long that is, get a ruler or tape measure and some chalk and go outside to mark off 23 feet. About how many cars could you fit in that distance? How many of you could fit?

Children's museums help families grow healthy and strong.
So, visit www.GoodtoGrow.org often, but don't stay too long!
